26 October 2021

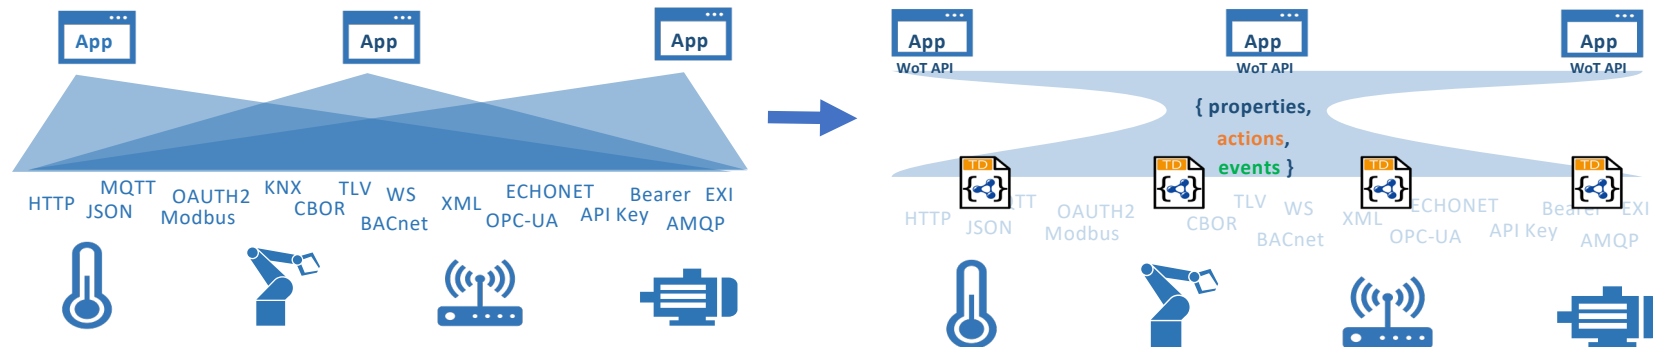

W3C Web of Things (WoT) WG/IG

Web of Things (WoT)

- ✓ Problem of “IoT silos”
- ✓ Developers have hard time to integrate various subsystems

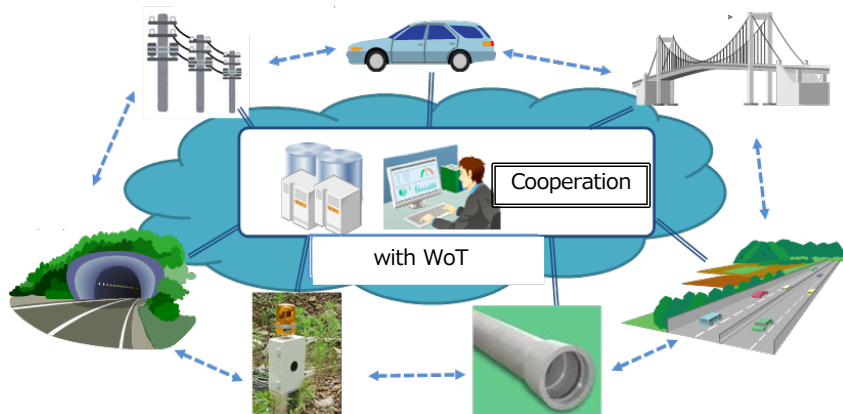

W3C WoT is standardization for interconnecting various IoT platforms using Web technologies.

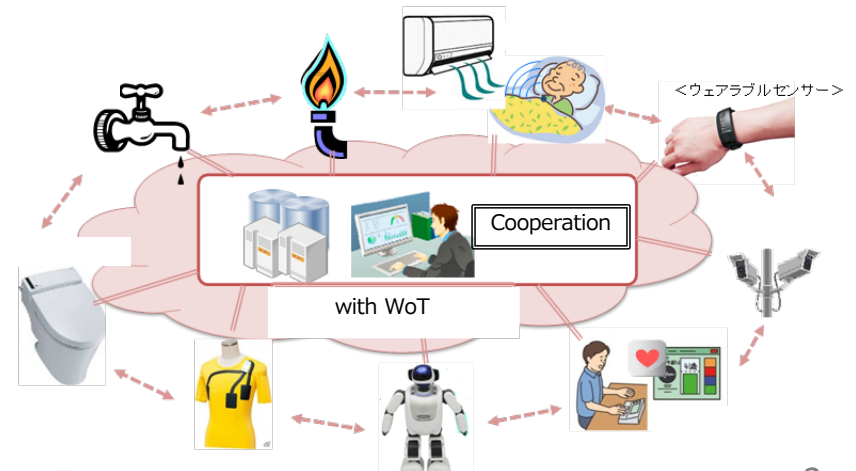

Our expectation for the future society using WoT

- ✓ WoT as a solution to improve the situation
- ✓ Social services, e.g., public infrastructure and health care

Efficient maintenance of various deteriorated public infrastructure

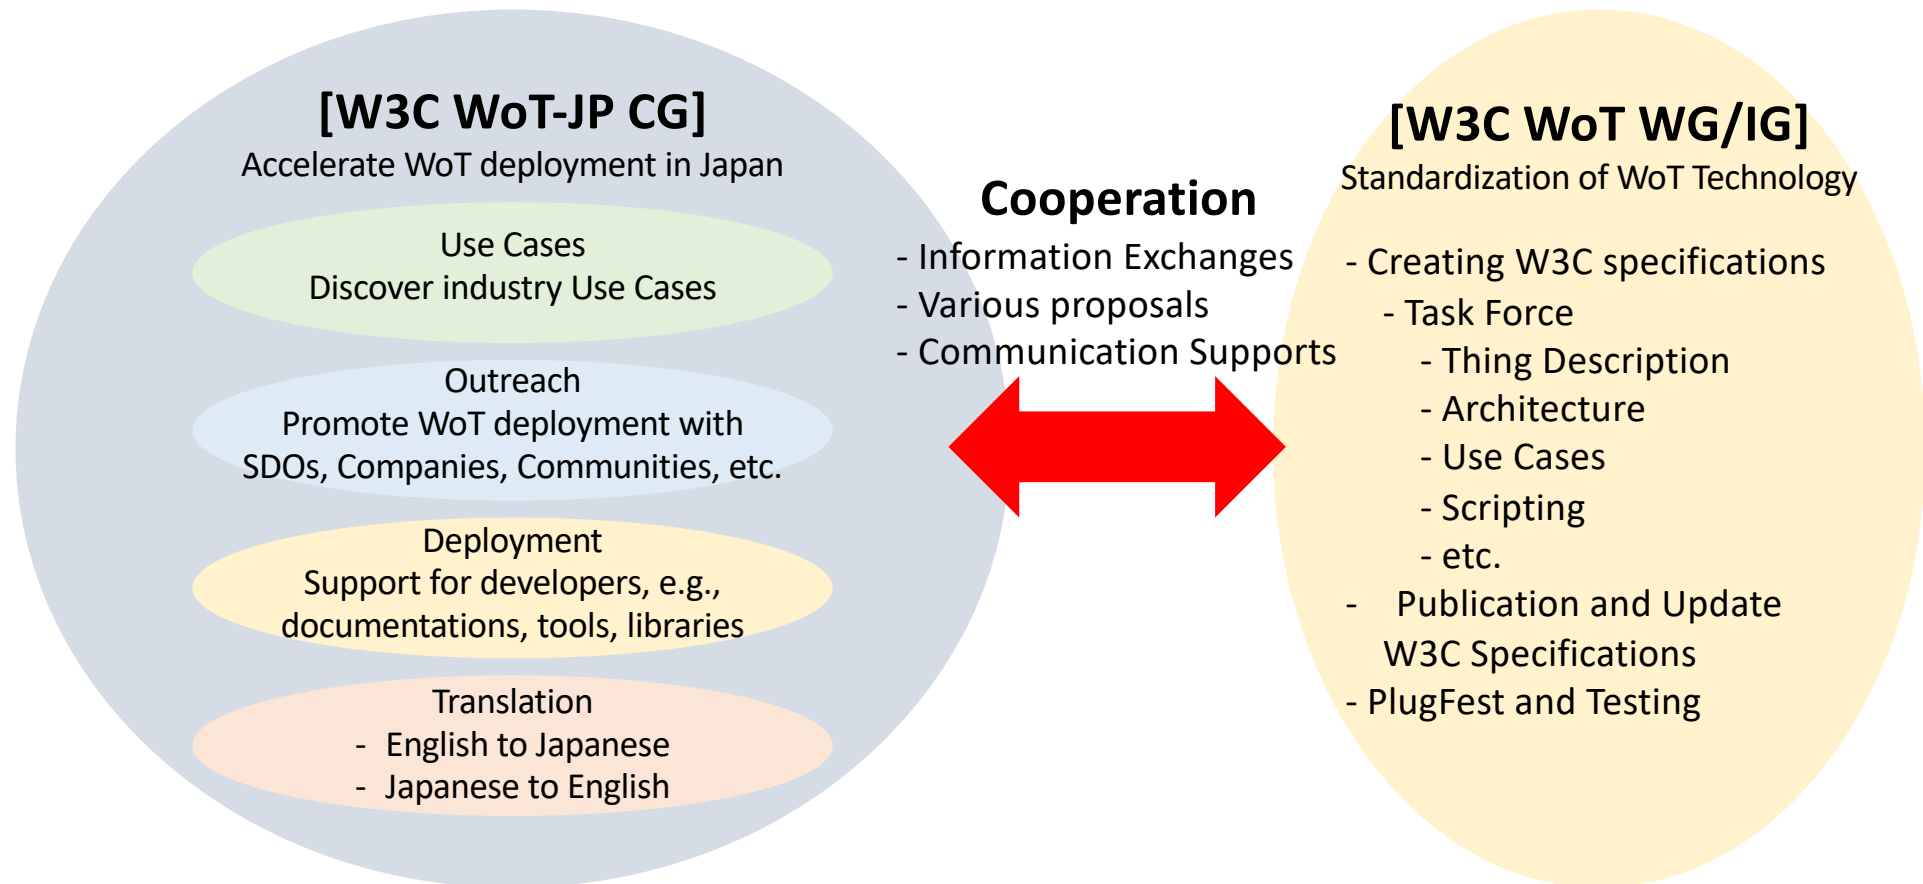

Comprehensive monitoring and health care of an aging community

WoT-JP CG – Accelerate WoT Deployment
